---

## PROFESSIONAL SUMMARY

Cloud, DevOps and Site Reliability Engineering consultant with more than three years of hands-on experience building, operating and improving production environments. Experience with AWS architecture, Terraform, Kubernetes, CI/CD, GitOps and observability, including infrastructure provisioning, containerized application delivery, incident investigation and collaboration with development teams. Engineering background that supports a structured approach to planning, risk, cost and problem-solving.

---

## TECHNICAL SKILLS

- Cloud & Infrastructure as Code: AWS, Terraform, Infrastructure as Code, Linux and networking
  - Containers & Orchestration: Docker, Kubernetes, Amazon EKS and Helm
  - CI/CD & GitOps: GitHub Actions, Jenkins, Argo CD, Git and delivery pipelines
  - Observability: Prometheus, Grafana, Loki, Elastic Stack, Kibana and OpenTelemetry
  - SRE & Operations: troubleshooting, synthetic monitoring, incident investigation, availability and reliability
- 

## PROFESSIONAL EXPERIENCE

Cloud, DevOps & SRE Consultant

FSO Cloud Consulting | Jan 2025 - Present | Florianopolis, SC, Brazil | Remote

Independent consulting focused on AWS architecture, infrastructure automation, CI/CD, observability and cloud-native operations.

- Design and evolve AWS architectures considering availability, scalability, security, networking and cost.
- Automate infrastructure provisioning with Terraform and Infrastructure as Code practices.
- Build and operate containerized environments with Kubernetes, Amazon EKS, Docker and Helm.
- Implement CI/CD, GitOps, synthetic monitoring, dashboards and actionable alerts.
- Investigate failures using metrics, logs, APIs and availability data to support incident resolution.

## DevOps Engineer

FCamara | Jan 2023 - Dec 2024 | Florianopolis, SC, Brazil | Remote

Worked on the automation, operation and evolution of cloud infrastructure and Kubernetes environments supporting production applications.

- Automated AWS infrastructure provisioning with Terraform, including VPC, IAM, EC2, RDS, S3 and Amazon EKS.
- Designed and standardized CI/CD pipelines with GitHub Actions, improving build and deployment consistency.
- Deployed and maintained containerized applications on Kubernetes using Helm for release management.
- Implemented and enhanced observability with Prometheus, Grafana, Loki and the Elastic Stack.
- Supported production environments through troubleshooting, incident investigation and failure analysis.

## Civil Engineer

Cymaco Engenharia | Feb 2020 - Jan 2023 | Florianopolis, SC, Brazil

Planned and monitored construction projects with responsibility for budgets, financial analysis, schedules, resources and decision support.

- Developed systems thinking, organization, risk analysis and structured problem-solving.

---

## TECHNICAL PROJECTS

### > Secure Frontend Delivery on AWS [Completed]

Tech Stack: React, Amazon S3, CloudFront, ACM, Route 53 and OAC

Delivered a React SPA from a private S3 origin through CloudFront. Validated HTTPS redirection, SPA routing, private-origin access controls and cache behavior.

### > Serverless Marketplace with Identity and Events [In Progress]

Tech Stack: Cognito, API Gateway, Lambda, DynamoDB, Amazon S3 and SQS

Evolving the published SPA into an architecture with authentication, protected APIs, persistence and asynchronous order processing with a dead-letter queue.

### > End-to-End DevOps Platform on AWS [Lab]

Tech Stack: AWS, Terraform, Jenkins, Kubernetes, Argo CD, Prometheus and Grafana

Provisioned AWS infrastructure and connected CI/CD, Kubernetes deployment, GitOps and observability in one delivery workflow.

### > Multi-Cluster Kubernetes Observability [Lab]

Tech Stack: AWS, EKS, Terraform, Prometheus, Grafana, Loki and Fluent Bit

Separated application and observability clusters while centralizing metrics and logs and automating infrastructure and networking.

---

## ADDITIONAL TECHNICAL PROJECTS

### > Kubernetes 360-degree Observability [Lab]

Tech Stack: Kubernetes, Prometheus, Grafana, Loki, OpenTelemetry and Tempo

Correlated metrics, logs and distributed traces and applied SLIs, SLOs and error-budget concepts.

### > FinOps & AWS Cost Optimization [Lab]

Tech Stack: AWS Cost Explorer, AWS Budgets, Compute Optimizer and Lambda

Implemented cost monitoring, budget alerts, rightsizing analysis and automation for idle resources.

---

## EDUCATION

Bachelor's Degree in Computer Science - In Progress

Universidade do Sul de Santa Catarina - Unisul | 2026 - 2030

Bachelor's Degree in Civil Engineering

Universidade do Sul de Santa Catarina - Unisul | 2012 - 2017

Technical Degree in Building Construction

Instituto Federal de Santa Catarina - IFSC | 2010 - 2011

---

## CERTIFICATIONS & COURSES

- AWS Certified Cloud Practitioner
- Linux Essentials - Linux Professional Institute
- IBM DevOps and Software Engineering Professional Certificate - IBM / Coursera - In Progress
- Terraform - From Basic to Advanced
- SRE DevOps: End-to-End Journey
- Databricks Fundamentals - Databricks Academy

---

## LANGUAGES

- Portuguese: Native
- English: Professional Working Proficiency
- French: Elementary
